## **CAHFSE Quarterly Report**

July 1 - September 30, 2003

## Reporting Units

Figure 1 shows the aggregate number of market hogs on all CAHFSE sites over time. These inventory numbers will be larger than those shown in Table 1, which reports only sites where fecal samples were collected. This graph may rise with the addition of more

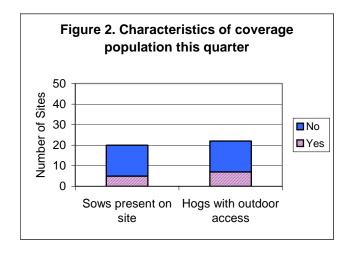

sites to CAHFSE or with the substitution of larger sites in CAHFSE.

Table 1 shows the number of sites where fecal samples were collected during the reference quarter. The total number of sites in this table may be less than the total number of sites participating in the CAHFSE project because some sites may not have had market hogs eligible for fecal sampling at the time of

Table 1. Structure of the coverage population*						
	Sites		Pens			
	Number	Market hog	Number of	Market hog		
State	of sites	inventory	pens	inventory		
IA	9	22,070	39	3,451		
MN	4	8,571	26	2,046		
NC	8	56,385	57	1,171		
TX	1	375	2	150		
Total	22	87,401	124	6,818		

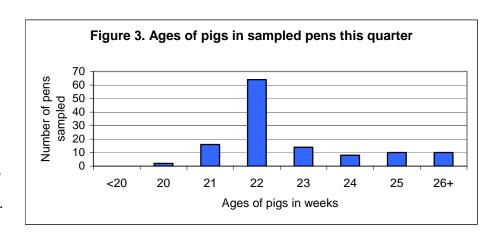

<sup>\*</sup>for sites where fecal samples were collected

the visit. The third column shows the total number of market hogs on the sites where fecal sampling occurred in each of the States. The fourth column shows the number of pens where fecal samples were collected. The last column shows the number of market hogs present in the pens where fecal samples were collected.

To represent the diversity of swine production facilities, some farrow-to-finish sites were enrolled in CAHFSE as well as sites that had only weaned market hogs. Likewise some indoor-only sites were enrolled as were some sites where hogs had outdoor access. Figure 2 shows the number of the sites sampled this quarter (i.e., sites where fecal samples were collected) with sows present or where hogs had outdoor access.

CAHFSE Quarter Report - page 1 July – September, 2003 Figure 3 shows the number of pens sampled by the average age of hogs in those pens. The goal of CAHFSE was to collect fecal samples from pens of hogs nearing the end of the finishing phase, i.e., approximately 22 weeks of age or older.

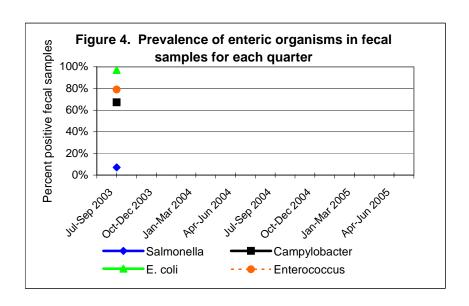

## Enteric organisms

Table 2 shows prevalence of enteric organisms cultured from fecal samples this quarter.

Table 2. Summary of isolation of enteric organisms from fecal samples					
	Number				
	of	Number of		Number	Percent
	samples	positive	Number of samples	of	samples
Organism	tested	samples	with multiple isolates	isolates	positive
Salmonella	824	59	0	59	7.2%
Campylobacter	338	227	0	227	67.2%
E. coli	338	326	0	326	96.4%
Enterococcus	338	267	1	268	79.0%

Figure 4 shows the prevalence of each enteric organism in fecal samples by quarter.

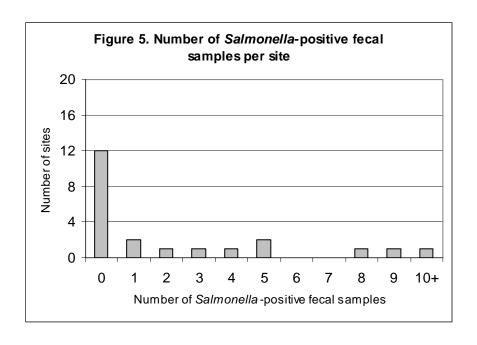

Tables 3 shows the site and pen prevalence of *Salmonella* recovery from fecal samples collected for each state this quarter.

Table 3. Number of fecal samples collected and *Salmonella* prevalence per site and per pen

-	Number of		Number of sites		
	samples	Number of	positive for	Number	positive for
State	collected	sites	Salmonella	of pens	Salmonella
IA	310	9	4	39	8
MN	160	4	0	26	0
NC	320	8	5	57	15
TX	40	1	1	2	1
Total	830	22	10	124	24

Figure 5 shows the number of sites with various numbers of Salmonella-positive fecal samples this quarter.

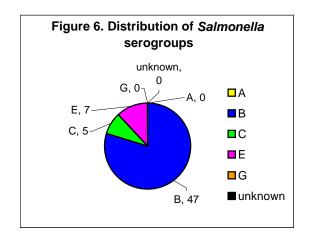

Figure 6 shows the *Salmonella* serogroups represented in positive fecal cultures this quarter.

Table 4 shows the most common *Salmonella* serotypes identified and the number of sites where these samples were isolated.

Table 4. Frequency of Salmonella serotypes cultured				
Salmonella serotype	Number of isolates	Number of sites		
Typhimurium (copenhagen)	21	4		
Derby	13	3		
Give	7	11		
Heidelberg	7	1		
Typhimurium	5	1		
Mbandaka	3	1		
Agona	11	1		
Kentucky	1	1		
Muenchen	1	1		
All others	0	0		
Total	59	22		

## Antimicrobial Resistance—Salmonella

Table 5 shows the percent of all *Salmonella* isolates from fecal samples that were resistant to each of the antimicrobial drugs on the panel. For the purpose of this analysis, isolates that were classified as 'intermediate' were considered susceptible.

Table 5. Number and percent of <i>Salmonella</i> isolates from fecal samples resistant to each antimicrobial tested				
	Number of isolates	Percent of		
Antibiotic	resistant	isolates resistant		
Amikacin	0	0.0%		
Amoxicillin / Clavulanic acid	2	3.4%		
Ampicillin	28	47.5%		
Cefoxitin	2	3.4%		
Ceftiofur	2	3.4%		
Ceftriaxone	0	0.0%		
Cephalothin	2	3.4%		
Chloramphenicol	13	22.0%		
Ciproflocacin	0	0.0%		
Gentamicin	1	1.7%		
Kanamycin	13	22.0%		
Naladixic acid	0	0.0%		
Streptomycin	41	69.5%		
Sulfa	32	54.2%		
Tetracycline	55	93.2%		
Trimethoprim / Sulfa	3	5.1%		

Figure 7 shows the percent of *Salmonella* isolates from fecal samples that were resistant to the specified number of antimicrobials.
